

BUZZARD

→ LIMITED EDITION →

The Buzzard takes you on a fuzzy flight from wasp-like buzzes to thick and greasy fuzzes. Two NOS germanium transistors lie at the heart of this bird. Each transistor serves up its own flavour: the first, a dark and thick boost; the second, a super bright and buzzy full-on fuzz. These two sounds blend together with the BUZZ control, then the CONTOUR control sculpts both high and mid-range content of the tone. Two simple controls, coupled with the VOLUME, can create classic Fuzzrite, 60s bite; pseudo octave effects; fuzzy filtered wah like sounds; dense, chewy distortion and much more.

CONTROLS & SPECIFICATIONS

BUZZ: Blends between the two fuzz sounds.

CONTOUR: Low pass filter that adjusts the high and mid-range content of the second (super bright) fuzz sound. Fully CCW is the darkest sound; fully CW the brightest. As the CONTOUR knob affects only the second fuzz sound, it has a greater effect when the BUZZ control is set past half way

LEVEL: Sets the overall output level.

POWER: A standard 9 volt DC regulated power supply with a 2.1 mm negative tip barrel plug or a 9 volt PP3 battery. If you intend on sharing the same powers supply with other pedals, please ensure it is one with isolated outputs. DO NOT DAISY CHAIN WITH OTHER PEDALS: THIS MAY DAMAGE YOUR BUZZARD

CURRENT DRAW: 5 mA

DIMENSIONS: (including knobs and jacks): 125x95x55 mm
