

FUZZ

HUDSON ELECTRONICS, UK

Classic germanium fuzz based around 'mkIV' circuit

RIGHT JACK - Plug your guitar or bass in here. Vintage style fuzz work best if plugged directly into your guitar so if you are using the pedal in conjunction with other effect pedals I recommend placing it in your effects chain (even before tuners).

LEFT JACK - Plug your amplifier in here.

VOLUME - Controls the overall volume of the pedal.

FUZZ - Controls the intensity of the fuzz effect. For other textures and tones try rolling back the volume control on your guitar.

TREBLE - BASS - Controls the tonal character of the pedal. Anti-clockwise is treble and clockwise is bass boost.

DC SOCKET - If using the pedal with a DC power supply unit (PSU) please ensure it is a 9v regulated 2.1mm negative centre type. Any other type may damage your pedal. If you plan on sharing the same PSU with other pedals it must be one with isolated outputs E.g. Voodoo Lab PP2.

For long battery life please unplug the input jack when not in use. To replace battery completely unplug the unit then remove the base plate. I recommend using Zinc Chloride or Zinc Carbon batteries for best results.
