

GOSPEL BOMB

HUDSON ELECTRONICS, UK

Gospel Bomb is a vintage style germanium boost based on the classic 'Range Master' booster

IN - Plug your guitar in here.

OUT - Plug your amplifier in here.

BOOST - Controls the output level and gain of the pedal.

THICKNESS - Adjusts the range of frequencies effected by the booster. Fully anticlockwise is treble boost, as the knob is turned clockwise more mid and low frequencies are boosted.

DC SOCKET - If using the pedal with a DC power supply unit (PSU) please ensure it is a 9v regulated 2.1mm negative centre type. Any other type may damage your pedal. If you plan on sharing the same PSU with other pedals it must be one with isolated outputs E.g. Voodoo Lab PP2.

For long battery life please unplug the input jack when not in use. To replace battery completely unplug the unit then remove the base plate. I recommend using Zinc Chloride or Zinc Carbon batteries for best results.
