

OVERDRIVE 999

→ LIMITED EDITION →

A versatile drive pedal packed with attitude and full of character. It can cover classic overdrive and distortion as well as, at extreme settings, fuzz and boost.

The Overdrive 999 is a heavily modified version of that infamous green overdrive, tuned for more bass, wider gain range, greater headroom and amp-like clipping. The powerful two band Baxandall equaliser section is taken from an old Studer recording console and provides up to 15dB of cut and boost of the high and low bands. Combining the EQ and DRIVE control allows you to create a myriad of different sonic textures. The extended frequency response and wide ranging equaliser allow it to work just as well on bass as on guitar.

With the EQ set flat (11 o'clock) the OVERDRIVE 999 just adds grit, without messing too much with the natural sound of your amplifier. Pull back the TREBLE and BASS to create that classic mid-focused overdrive or crank them both up to land you squarely in Black Face Fender territory. Classic treble boost tones are available by keeping the DRIVE low and pushing the TREBLE and VOLUME; or crank up the DRIVE and BASS to slam the front end of your amp for fuzzed-up, exploding amp tones.

FEATURES

- High quality Burr-Brown Op-amp
- Hand selected N.O.S. Germanium transistor
- Low Noise Metal Film Resistors
- CITEC potentiometers
- Neutrik jack sockets
- Heavy duty foot switch

CONTROLS

DRIVE - Regulates how hard the pedal is driven. From overdrive at lower settings to fuzzy distortion when set to maximum.

BASS - Adjusts the low end content of the signal.

TREBLE - Adjusts the low end content of the signal.

LEVEL - Sets the overall output.

SPECIFICATIONS

TREBLE EQ: +/- 15 dB at 9000 Hz (shelving)

BASS EQ: +/- 15 dB at 165 Hz (shelving)

POWER: A standard 9-24 volt DC regulated power supply with a 2.1mm negative tip barrel plug or a 9 volt PP3 battery. Running at higher voltages will give you more headroom, less distortion and less compression and sag. This is perfect for use on bass, baritone and low tuned guitars; it also is useful if your guitar has high output pickups and pushes the Overdrive 999 too hard

CURRENT DRAW: 15 mA

DIMENSIONS: (including knobs and jacks): 120x100x55 mm
