

SOUL BOMB

HUDSON ELECTRONICS, UK

Soul Bomb is a vintage style all germanium fuzz & boost. The fuzz is a tweaked version of the classic 'Arbiter Fuzz Face' followed by a 'Range Master' style Booster.

IN - Plug your guitar in here. If you are using the Soul Bomb in conjunction with other effect pedals I recommend placing it first in your effects chain (even before tuners).

OUT - Plug your amplifier in here.

RIGHT FOOTSWITCH - Engages the fuzz section.

LEFT FOOTSWITCH - Engages the booster section.

LEVEL - Controls the overall volume of the fuzz.

ATTACK - Controls the intensity of the fuzz effect.

THICKNESS - Adjusts the range of frequencies effected by the booster. Fully anticlockwise is treble boost, as the knob is turned clockwise more mid and low frequencies are boosted.

BOOST - Controls the amount of boost.

DC SOCKET - If using the pedal with a DC power supply unit (PSU) please ensure it is a 9v regulated 2.1mm negative centre type. Any other type may damage your pedal. If you plan on sharing the same PSU with other pedals it must be one with isolated outputs E.g. Voodoo Lab PP2.

When not using the DC socket to preserve battery life please unplug the input jack when not in use. To replace battery completely unplug the unit then remove the base plate. I recommend using Zinc Chloride or Zinc Carbon batteries for best results.
