

STROLL ON

HUDSON ELECTRONICS, UK

Stroll On is vintage style germanium fuzz based on the Classic MkII Professional' circuit

IN - Plug your guitar in here. Vintage style fuzzes work best if plugged directly into your guitar so if you are using the Stroll On in conjunction with other effect pedals I recommend placing the Stroll On first in your effects chain (even before tuners).

OUT - Plug your amplifier in here.

ATTACK - Controls the intensity of the fuzz effect. For a wider range of 'cleaner' tones try rolling back the volume control on your guitar.

LEVEL - Controls the overall volume of the pedal.

DC SOCKET - If using the pedal with a DC power supply unit (PSU) please ensure it is a 9v regulated 2.1mm negative centre type. Any other type may damage your pedal. If you plan on sharing the same PSU with other pedals it must be one with isolated outputs E.g. Voodoo Lab PP2.

For long battery life please unplug the input jack when not in use. To replace battery completely unplug the unit then remove the base plate. I recommend using Zinc Chloride or Zinc Carbon batteries for best results.
